

# RETHINK EFFICIENCY

## WITH TRBOCALL THE ULTRA SMART DIGITAL TWO WAY RADIO SOLUTION

Streamlining manufacturing production by addressing current processes and worker inefficiencies is key to keeping customers happy and maintaining a competitive advantage; because when workers do more with less, factories work smarter.

### CONNECTING PROCESSES; THE SMART WAY

Smart technology undoubtedly streamlines operations by automating and connecting processes, so more gets done and less wasted. But for automation to work effectively, the workforce has to be connected through clear, immediate voice and data communications; only then can the plant work seamlessly and react to every event.

### ENHANCING EFFICIENCY WITH TRBOCALL

Efficiency has shaped the development of the new generation of digital radios. Purpose built for plant communications, they include a range of mission critical features that bring efficiency to the forefront.

**PTT (Push-to-Talk)** - Whole work teams can communicate instantaneously with a single button push. The large PTT button on digital radios makes communication easier than ever, even for workers wearing gloves.

**Intelligent Audio** - Factories can be noisy places and workers need to hear and be heard clearly. Digital radios adjust volume automatically in line with fluctuating background noise to ensure commands are not misunderstood, or requests for help ignored.

**Text Messaging** - When voice communication isn't practical due to excessively high noise, workers can quickly and easily share information with colleagues using text messaging.

**Command & Control** - Integrates powerful voice and data communications with advanced fleet control and dispatch functionalities. Control room personnel are better equipped to organise and deliver routine tasks, communicate with teams on the plant floor and make faster decisions.

**Work Order Ticketing** - Prioritises personnel and creates efficient workflows. Work order ticketing helps resolve issues fast, enhances the efficiency of personnel responding to issues and coordinates maintenance. It also helps generate reports to ensure efficient workflows.

**WAVE Work Group Communications** - Instantly connects workers using different devices and networks. WAVE allows workers to communicate with colleagues over push-to-talk, whether on a smartphone, 2-way radio, laptop, landline or tablet. It removes barriers to interoperability for better real-time coordination between teams.
