QUICKLY AND EASILY**

INCREASE SAFETY AROUND YOUR NURSERY QUICKLY AND EASILY

Whilst day nurseries are safe and secure environments for babies and young children, unfortunately there are times when accidents can occur. When an incident occurs there is a fear of litigation or criminal prosecution, which could also lead to compensation claims costing thousands of pounds.

Claims for negligence are increasing

2-WAY RADIOS FOR USE IN DAY NURSERIES

Eemits Communications recognises that babies and young children develop by being very inquisitive and love to explore their surroundings and this can pose potential risks.

As day nurseries tend to be busy and at times, noisy environments, it can sometimes be difficult to obtain the attention of staff, which could potentially lead to accidents occurring.

There are a number of ways in which two-way radios can help in the day-to-day running of a day nursery. Licence free radios are a low cost effective method of easy communication. With the push of a button you have instant communications. You are able to talk to an individual user, multiple users, or all users and the radios themselves are robust enough to withstand an angry toddler.

Eemits Communications have previously worked with a day nursery who were concerned about communication within their nursery. The nursery had a number of rooms and a large outdoor play area which was sectioned off for particular age groups. However, staff wanted to increase safety in the nursery and recognised that two-way radios could be the solution they required. There were cordless phones installed in many of the rooms but were not suitable for outdoor use and staff were unable to contact the other rooms.

The idea of the licence free radios had been monitored by the management team of the nursery and they had purchased some for a trial period from a well-known high street retailer. The radios worked well for the first few days, but then the nursery began to experience problems. This led the nursery to contact Eemits Communications. The nursery knew that two-way radios were an ideal solution for them, but they required a model that could cope with daily use in the nursery.

Eemits Communications provided the nursery with a two-way radio solution that did not require a licence, was in the nursery's price range, robust enough to use outside, could withstand toddlers getting their hands on them and was small and compact. The nursery purchased radios for for each room, plus extras for use when the children were playing in the outdoor area.

The radios have provided to be an invaluable asset for the nursery. Staff can contact one another easily whilst being in separate rooms and they are able to use the group call facility easily. When the radios have been used outside they have come into their own. If the nursery staff notice a potential risk or hazard they can notify another member of staff quickly and easily without startling the children, which then prevents an accident from occurring.

INVALUABLE DIGITAL 2-WAY RADIO FEATURES FOR DAY NURSERIES

Using digital two-way radios you can achieve 100% indoor and outdoor coverage of the whole nursery

Light and compact

Reliable and quality radios at affordable prices

Contact other radio users instantly - no need to wait for a dial tone

Talk to multiples users at the same time

Rechargeable batteries with up to 18 hours of battery life
