

RETHINK PRODUCTIVITY WITH TRBOCALL THE ULTRA SMART DIGITAL TWO WAY RADIO SOLUTION

Soaring customer expectations for faster deliveries is a constant pressure on manufacturers to build a reliable and stable production line; because when people work without interruption, factories work smarter.

CONNECTING INFORMATION; THE SMART WAY

Smart technology connects people with the information they need to work on their tasks, without interruption or distraction. Using the latest voice and data communications, everyone has the tools they need to work at their productive best.

ENHANCING PRODUCTIVITY WITH TRBOCALL

Productivity has shaped the development of the new generation of digital radios. Purpose built for plant communications, they include a range of mission critical features that bring efficiency to the forefront.

Intelligent Audio - Factories can be noisy places and workers need to hear and be heard clearly. Digital radios adjust volume automatically in line with fluctuating background noise to ensure commands are not misunderstood, or requests for help ignored.

Work Order Ticketing - Prioritises personnel and creates efficient workflows. Work order ticketing helps resolve issues fast, enhances the efficiency of personnel responding to issues and coordinates maintenance. It also helps generate reports to ensure efficient workflows.

Location Tracking - Knowing precisely where resources are at any given time is essential. Location tracking keeps tabs on people and assets as they move around a facility. This makes it easy to find workers quickly and identify the most appropriate worker for a specific task.

Bluetooth - Enables fast wire-free communications between devices. With Bluetooth, workers can share information effortlessly with colleagues and take advantage of Bluetooth accessories; including headsets for hands-free communication. Bluetooth also enables precise indoor location tracking.

Over-the-Air Programming - Allows radios to be managed over Wi-Fi from a central location. This saves workers from having to bring their device to a hub, optimising time management and productivity.

WAVE Work Group Communications - Instantly connects workers using different devices and networks. WAVE allows workers to communicate with colleagues over push-to-talk, whether on a smartphone, 2-way radio, laptop, landline or tablet. It removes barriers to interoperability for better real-time coordination between teams.
