

TRBOCALL INTELLIGENT RADIO FOR SMART,CONNECTED MANUFACTURING

Ultra Smart Digital Two Way Radio Solutions

TRBOCALL FOR MANUFACTURING

WE'RE IN THE AGE OF MASS PERSONALISATION

Cars. Clothing. Electronics. Even industrial equipment. Customers demand customised solutions, regardless of scale.

For manufacturers, it's an age of huge opportunity, but immense pressure.

Pressure, because meeting customer expectations profitably means finding ever-greater efficiencies, with increased risk of accidents or downtime. This is why lean principles continue to shape manufacturing methodology across the world.

Opportunity, because emerging technologies like 3D printing and the Internet of Things unlock new areas of innovation and competitive differentiation.

Eemits Communications operates on the front line of this new industrial revolution.

Our intelligent communication solutions are used by manufacturers all over the world to enable seamless communication, refined efficiency and rapid response to incidents.

Enhanced safety.

Reduced downtime.

Delighted customers.

Because when people can communicate clearly, they can work safely and efficiently.

TRBOCALL FOR MANUFACTURING

SAFETY

People get more done when they can communicate easily.

Smart Manufacturing and the Internet of Things are automating labour-intensive processes and driving efficiency. But they're still only as good as the people who use them.

TRBOCALL integrated communication solutions, including apps for processes such as Work Order Ticket Management, give users rapid access to the data they need, wherever they are working.

And they can push-to-talk for instant voice communication with the team on the factory floor, or for authorisation with a supervisor who is off-site on a mobile phone.

Instant connection with people and data.

Clear, immediate communication.

Fast, effective decisions.

The dramatic enhancements to the TRBOCALL portfolio enable the closer, real-time collaboration that accelerates time-to-market, reduces downtime and maximises safety.

"35% of US manufacturers currently collect and use data generated by smart devices to enhance manufacturing and operational processes..."

PwC/Zpryme Disruptive Manufacturing Innovations Survey 2014

"86% of manufacturing decision-makers see worker safety as a key priority for plant communications."

"45% experienced increased customer satisfaction."

ASQ 2014 Manufacturing Outlook Survey, American Society for Quality, Dec 2014

TRBOCALL FOR MANUFACTURING

PRODUCTIVITY

Profit margins are under constant pressure. Costs are being cut but risk has to be managed.

Manufacturers are striving to do more, with less and less. And, they're struggling to find people with the essential skills they need.

Which means that people and the work they do are more precious than ever.

They need tools that allow them to work constantly at their productive best.

Sharing ideas.

Solving problems quickly.

Getting things done without disruption.

The dramatic enhancements to the TRBOCALL portfolio reduce the barriers to communication that limit productivity. They allow the real-time flow of information, ideas and decisions that drive innovation, shorten cycle times, and build job satisfaction and loyalty.

"52% of manufacturing companies want real-time messaging between machines and people."

"46% say digital radios can reduce downtime by 10 to 20%"

2015 Motorola Solutions Manufacturing Survey

"45% of plant operators say clarity and coverage of communications are among their top challenges."

"Costs of Downtime in the Manufacturing Industry," eMaint Enterprises, Dec 2014
